

Environmental Policy

As an ISO 14001 certified company, BCQ Solutions is committed to reducing our environmental impact through a comprehensive program of continual improvement, pollution prevention, and integration of sustainable practices into our core business strategy.

Proactive Environmental Management and ISO 14001 Compliance

We maintain an Environmental Management System aligned with ISO 14001 standards. This system provides a framework for setting, reviewing, and achieving our environmental objectives and targets. It guides our efforts in monitoring and continually enhancing our environmental performance.

Legislative Compliance and Beyond

We pledge to not only meet but, where possible, exceed the requirements of relevant environmental legislation and regulations. Our goal is to set a higher standard for environmental responsibility in our industry.

Waste Reduction and Resource Efficiency

We are committed to minimising waste and resource consumption. Our approach includes reducing, reusing, and recycling materials, and responsibly disposing of unavoidable waste to prevent pollution. We continuously seek ways to reduce our energy consumption and greenhouse gas emissions, favouring more efficient equipment and processes.

Water Conservation and Responsible Usage

Our policy includes a focus on water conservation. We aim to optimise equipment and processes to reduce water usage, actively identify and repair leaks, and encourage responsible water use among our staff.

Supplier and Contractor Environmental Standards

We evaluate the environmental performance of our suppliers and contractors, ensuring alignment with our environmental commitments. We also require contractors working on our sites to comply with our Environmental Management System and Policy.

Employee Engagement and Environmental Stewardship

We foster a culture of environmental responsibility among our employees at all levels. Through training and support, we empower our staff to understand environmental issues, take responsibility for their actions, and contribute innovative solutions to environmental challenges.

Transparent Communication and Public Availability

Our Environmental Policy, along with our environmental statements, is made publicly available. We believe in transparent communication about our environmental efforts and achievements.

Promoting Sustainable Choices and Circular Economy

We prioritise the selection of environmentally responsible products and consumables. In collaboration with our customers, we focus on selecting sustainable materials and promoting practices that support the circular economy, aiming to minimise landfill waste and maximize reuse and recycling.

Pollution Prevention and Impact Minimisation

We are dedicated to minimising pollution, particularly through preventing accidental emissions or discharges. We work cooperatively with appropriate public authorities and stakeholders to uphold high environmental standards.

Assessment and Monitoring of Environmental Impact

We regularly assess and monitor the environmental impact of our current and new activities, products, and processes. This ongoing evaluation helps us to minimise our impact on both the local and broader environment.

Inclusive Community and Stakeholder Engagement

Our commitment extends beyond our immediate operations. We engage with local communities, environmental organisations, and other stakeholders in our environmental initiatives. This collaboration helps us to broaden our impact and contribute positively to wider environmental goals.

Adaptation to Climate Change

We recognise the importance of addressing climate change. Our policy includes measuring our carbon footprint and taking steps to reduce, ensuring that our business remains resilient and environmentally responsible in a changing world.

Regular Review and Continuous Improvement

Our Environmental Policy is subject to regular reviews, ensuring it remains relevant and effective in addressing new environmental challenges and incorporating innovative practices. We are committed to continuously improving our environmental performance, adapting to new technologies, and adopting best practices in sustainability.
